Monitoring differential expression of genes in filamentous fungal cells uses fluorescence-labeled nucleic acids isolated from the cells and a substrate of expressed sequence tags.

Claim 86; Page 711; 3161pp; English

The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (BST). The ESTS are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of genes con a first filamentous fungal cells. Monitoring the same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production potential of the microorganisms to be improved. New genes may be discovered, cost them incroorganisms to be improved. New genes may be discovered, cost gene copy number variation and stability can be monitored. The expression of gene copy number variation and stability can be monitored. The expression of gene copy number variation and stability can be monitored. The expression of gene copy number variation and stability can be monitored. The expression conditions, environmental stress, spore morphogenesis, recombination, metabolic or catabolic pathway engineering. Using ESTS provides several davantages over genomic or random cDNA clones including elimination of credundancy as one spot on an array equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate analysis of the results. AAF07478 to AAF11247 copresents ESTS from Aspergillus niger: AAF18537 represents ESTS from Aspergillus oryzae; and AAF14879 to AAF18537 represents ESTS from Aspergillus or each in the present control or each in the present control or each in the area in the present control or each in the present entered or each invention %XCCCCCCCCCCCCCCCCCCCCCCCCCCCCCCC

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6639063

GENERAL INPORMATION:
APPLICANT: Unbear Nine Edwards, J.B.
APPLICANT: Jobert S.
APPLICANT: Glordano, J.Y.
TITLE OF INVENTION: ESTE and Encoded Human Proteins.
FILE REFERENCE: GENSET. 054PR2
CURRENT APPLICATION NUMBER: US/09/621,976
CURRENT FILING DATE: 2000-07-21
NUMBER OF SEQ ID NOS: 19335
SEQ ID NO 1363
LENGTH: 469
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 73, Application US/09621976

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 24, P

Publication No. US20060057564A1

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: Identifiction and Mapping of Single Nucleotide Polymorphisms

TITLE OF INVENTION: in the Human Genome

CURRENT PELICATION NUMBER: US/10/301,480

CURRENT FILING DATE: 2002-11-21

PRIOR APPLICATION NUMBER: US 60/311,695

PRIOR APPLICATION NUMBER: US 60/311,695

PRIOR FILING DATE: 2001-08-10

NUMBER OF SEQ ID NOS: 1226818

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 1128341

LENGTH: 635
                                                                                                                                                                                                                                                                                                                                                                                        Sequence 514932, Application US/10301480

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Econed into the Not I and Eco RI sites of the modified pT/T3 vector. Library went through one round of normalization to Cot5, and was constructed by Bento Soares and M. Fatima Bonaldo. "
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            598 bp mRNA linear EST 17-DEC-2003

Analysis of the mouse transcriptome based on functional annotation of 60,770 full-length cDNa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human Genome Sequences Mann. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center(GSC), Yokohama Institute

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TITLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /lone lib="NIA Mouse 15K CDNA Clone Set"
/clone is among a rearrayed set of 15,247 Clones from 11
clone is among a rearrayed set of 15,247 Clones from 11
embryo cDNA libraries (including preimplantation stage
embryos from unfertilized egg to blastocyst, embryonic
part of E7.5 embryos, extraembryonic part of E7.5
embryos, and E1.5 female mesonephros/gonad) and one
newborn ovary CDNA library. Average insert size 1.5 kb.
All source libraries are cloned unidirectionally with
Oligo(dT)-Not primers. References include: (1)

Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was grimed with a primer [5' animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was primed with a primer [5' animal Research in Riken prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the primer adapter of sequence [5' animal Research Research Regardant Research Regardant Re
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                COB10251

Clones are derived from the human BAC library RPCI-11. For BAC
library availability, please contact Pieter de Jong
(pieter@dejong.med.buffalo.edu). Clones may be purchased from
BACPAC Resources (http://bacpac.med.buffalo.edu/ordering_bac.htm)
or from Resear h Genetics (info@resgen.com). BAC end Web Server:
http://www.htsc.washington.edu
/clone lib="NIH MGC 257"

/note="Organ: oocyte; Vector: pExpress-1; Site_1: EccRV;
Site_2: NotI; cDNA was primed using oligo-dT primer:
5'-pGACTACTACACGCGACGCCCCC(T)25-3' and cloned into
the EcoRV/NotI sites of pExpress-1. Size-selection >0.5 kb
resulted in an average insert size of 1.0kb. This is a
normalized library (primary library is NIH MGC_256) and
was constructed by Express Genomics (Frederick, MD). Note:
this is a NIH_MGC library"

gene expression by rectifying mutations or deletions in a patient's gene expression by rectifying mutations or deletions in a patient's genome that affect the activity of GNNSET or by supplementing the patients own production of GENNSET polypeptides. Conversely, antisense nucleic acid molecules may be administered to down regulate GENNSET expression by binding with the cells' own genes and preventing their expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect to duratitate the presence of similar nucleic acid sequences in samples, and hence to determine which patients may be used of restorative therapy. The GENNSET polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators (agoniers and antagonists) of GENNSET polypeptide expression and activity. The present sequence is a GENNSET polypeptide of
                                                                                 potentially secreted proteins. The nucleic acids and the polypeptides they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET
                                                                 encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cytostatic; antiinflammatory; nootropic; neuroprotective; cardiant; gastrointestinal; gene therapy; GENSET; heavy metal toxicity; cancer; inflammatory disease; immune disorder; neuromuscular; toxicity; central nervous system; cardiovascular; gastrointestinal.

New GENSET polynucleotides and polypeptides, useful for treating heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, CNS, cardiovascular or gastrointestinal effects of the

WPI; 2003-075548/07.

```
The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ56911) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immume disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36911) encoding polypeptides (ABP75963-ABP76368). the invention

```
The invention interacts to tuil femilia man included according potentially secreted proteins. The nucleic acids and the polypeptides they encode may be used in the prevention, treatment and diagnosts of diseases associated with inappropriate GRNSET gene expression. For example, they be used to treat disorders associated with decreased GENSET gene expression by rectifying mutations or deletions in a patient's gene expression by rectifying mutations or deletions in a patient's gene expression by rectifying mutations or deletions in a patient's patients own production of GENSET polypeptides. Conversely, antisense nucleic acid molecules may be administered to down regulate GENSET carpression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence to determine which suffice may be in need of restorative therapy. The GENSET polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of GENSET polypeptide of expression and activity. The present sequence is a GENSET polypeptide
diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to full length GENSET human nucleic acids encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; secreted protein; gene therapy; vaccine; treatment; diagnosis; GENSET.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Full length GENSET human nucleic acids encoding potentially secreted proteins, useful in gene therapy and vaccination against a variety of diseases, and for diagnosis of those diseases.
                                                                                                                                                                                                                                                                                         ATGGCGTTAGAAGTCTTGATGCTCCTCGCTGTCTTGATTTGGACCGGTGCT 51

```
The present invention relates to the isolation of human GSSP3

polypeptide, and polynucleotide sequences that encode it. The GSSP3

polypeptide reduces circulating blood glucose levels, increases insulin

polypeptide reduces body mass. The GSSP3 polypeptide and

compliantly, and/or reduces body mass. The GSSP3 polypeptide and

compositionism, body weight loss, and prevention of body weight gain.

Compositions comprising GSSP3 polypeptides are useful for controlling

blood glucose levels, for treating metabolic-related diseases or

chood glucose levels, for treating metabolic-related diseases or

disorders (e.g. obesity, impaired glucose tolerance, insulin resistance,

ymdrome C, type I or II diabetes, diabetes related complications,

or syndrome C, type I or II diabetes, diabetes related complications,

microangiopathy, retinopathy, neuropathy, nephropathy, polycystic ovarian

canthosis nigricans, leprechaumism and lipoatrophy). The polypeptides

are also useful to improve physical performance during work or exercise,

are also useful to improve physical performance during work or exercise,

are also useful to improve physical performance during work or exercise,

can to treat dyslexia, attention-deficit disorder, attention-

deficit/Myperactivity disorder, and psychiatric disorders such as

schizophrenia. The present sequence represents human GSSP3 polypeptide
                                                                                                                                                                                                                                                                                                                                                      Reducing circulating glucose levels or increasing insulin sensitivity, useful for reducing body mass or preventing body weight gain, comprises administering composition comprising GSSP3 polypeptide.
                                                                                                                                                                                                       Chicca J, Yen-Potin F;

                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to novel human secreted proteins (ABR47633-ABR48145) and their coding sequences (ACC50344-ACC50856). The proteins and their coding sequences are useful for the preparation of a diagnostic or pharmaccutical composition for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, coronary arrhythmia, tachycardia, cardiac arrest, coronary arrhythmia, tachycardia, cardiac arrest, coronary arreatiosclerosis and myocardial ischaemia), neural disorders, immune gastrointestinal disorders, pulmonary disorders, renal disorders, proliferative disorders pulmonary disorders, renal disorders, proliferative disorders and/or cancerous diseases and conditions, for wound healing and epithelial cell proliferation, to treat inflammation or preventing neural damage which occurs in neuronal disorders or neurodegenerative conditions such as Alzheimer's disease and Parkinson's disease, to enhance bone and periodontal regeneration and aid in tissue transplants or bone grafts, to prevent skin ading or hair loss, to extrans the prevent and differentiation of haematopoietic cells and bone manned before transplants or combination with other cyckines, to marrow for enhance procombination with other cyckines, to maintain and and periodontal regeneration of maintain and and periodontal regeneration of maintain and and periodon with other cyckines, to maintain and and periodon with other cyckines, to maintain and and periodon with other cyckines, to maintain and periodon with other cyckines, to maintain and and periodon with other cyckines, to maintain and periodon with other cyckines, to maintain and and periodon with other cyckines, to maintain and periodon with other cyckines, to maintain and periodon and and periodon with other cyckines, to maintain and periodon and and periodon with other cyckines, to maintain and periodon and and perio
                                                                                                                                                                                                                                                                    Novel human secreted proteins, useful for detecting, preventing, diagnosing, prognosticating, treating and/or ameliorating cardiovascular disorders such as arrhythmia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           organs before transplantation or for supporting cell culture of primary tissues, to increase or decrease differentiation or proliferation of embryonic stem cells, or to modulate mammalian characteristics or metabolism. Note: The sequence data for this patent was published in electronic format and is available from WIPO at they, wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, secreted protein, digestive disorder, gastrointestinal disorder, mouth, oesophagus, stomach, small intestine, large intestine, liver, biliary tract, pancreas, cancer, tumour, hyperproliferative disorder,

ABZ71190-ABZ71478 represent cDNAs corresponding to 178 human secreted protein genes, and ABP00011-ABP00299 represent the proteins they encode. Drotein genes, and ABP00011-ABP00299 represent the proteins they encode. CC protein genemic fragments. The invention also encompasses antibodies specific for the secreted proteins, and recombinant concerted proteins, and modulators of proteins. The secreted proteins, nucleic acids encoding them, antibodies or antibody fragments specific for the secreted proteins, and modulators of protein activity are useful for diagnosing, treating, ameliorating or preventing diseases are useful for diagnosing, treating, ameliorating or preventing cigestive disorders. Such conditions include disorders of the mouth, coesophagus, stomach, small intestine, large intestine, liver, biliary tract and pancreas, and include cancers of these organs and tissues. The coesophagus and their nucleic acids may also be used in the creatment of immune disorders, and to promote wound healing. Nucleic acids proper invention may be used for chromosome identification, chromosome coeff the invention may be used for chromosome identification, chromosome coeff the invention may be used for chromosome identification, chromosome coeff the invention may be used for chromosome identification, and samples, as hybridisation probes, and as molecular weight amarkers. The present sequence represents a human secreted protein of the
New human secreted proteins and nucleic acids, useful for detecting, preventing, diagnosing, prognosticating, treating and/or ameliorating e.g. gastrointestinal diseases and disorders, or cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 MetAlaLeuGluValLeuMetLeuLeuAlaValLeuIleTrpThrGlyAla 17

                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated nucleic acid molecules ADB91065-
ADB91448 and ADB91835-ADB91911 encoding human secreted proteins ADB91449-
ADB91344. ABAO disclosed is a recombinant vector comprising
the recombinant vector. The polypeptide of the invention is useful in
identifying a binding partner by contacting the polypeptide with a
claentifying a binding partner by contacting the polypeptide with a
claentifying a binding partner by contacting the polypeptide with a
claentifying a binding partner by contacting the polypeptide with a
claentifying a binding partner by contacting the polypeptide with a
claentifying a binding partner by contacting the polypeptide. Polymelectide
antibody or its fragment, agonist or antagonist are useful for preparing
a pharmaceutical composition for diagnosing or treating diabetes or
conditions related to diabetes. The present sequence is that of the human
immunoglobulin Fc portion used to generate fusion proteins, increasing
the stability of the fused protein as compared to the secreted protein
conju. Note: The sequence data for this patent did not form part of the
printed specification, but was obtained in electronic format directly
from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The invention discloses a polynuclectide comprising a sequence selected from 1970 fully defined nuclectide sequences which encode novel colypeptides. Also claimed is a polypeptide encoded by the polynuclectide or pebtide or tits partial peptide, an antibody binding to the polypeptide or peptide of the polynuclectide, immunologically assaying the polypeptide or peptide or text of the polynuclectide by contacting the polypeptide or peptide or with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polynuclectide in an expressible manner and an antisense polynuclectide. The oligomuclectide is useful as a primer for synthesising the polynuclectide in an expressible manner and an antisense polynuclectides and encoded for the formation of the polynuclectides and encoded genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or cell cranscription-related proteins, signal transduction-related proteins, cranscription-related proteins, disease-related proteins and genes cancer, tumours. The cDNA may be used to regulate concing them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate sequence data for this patent is not represented in the printed protein between the printed proteins parter of specification, but is based on sequence information supplied by the

```
The invention relates to a novel human secreted polypeptide comprising a defined sequence given in the specification. The polypeptide, nucleic acid molecule, antibody, agonist or antiagonist of the invention may be useful for preparing a composition for diagonosing or treating a haemopoletic or haematologic disorder such as anaemia, autoimmune disorders such as rheumatold arthritis, inflammation, Grave's disease, disorders con a rheumatold arthritis, inflammation, Grave's disease, neurodegenerative disorders including Parkinson's disease and Alzheimer's cases, wounds and hyperproliferative disorders including atherosclerosis or cancer, as well as bacterial, viral, fungal or parasitic infections. The polypeptide may also be used during gene therapy procedures and for identifying a binding partner by contacting the polypeptide with a binding partner and determining whether the binding partner increases or decreases the activity of the polypeptide.
                                                                                                                                                        antianaemic; antirheumatic; antiarthritic; antiinflammatory; antithyroid; antidabetic; immunosuppressive; dermatological; nephrotropic; antidatericis immunosuppressive; dermatological; nephrotropic; antibacterial; virucide; fungicide; antiparastic; antiarteriosclerotic; vulnerary; cytostatic; haemopoietic; haematologic; anaemia; autoimmune disorder; haematologic; anaemia; autoimmune disorder; rheumatoid arthritis; inflammation; Grave's disease; diabetes; systemic lupus erythematosus; glomerulonephritis; neurodegenerative; Parkinson's; Alzheimer's; wound; hyperproliferative; atherosclerosis; cancer; bacterial; viral; fungal; parastic infection; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New human secreted polypeptide for diagnosing, preventing or treating hematopoietic or hematologic disorders (e.g. anemia), autoimmune disorders (e.g. diabetes) or hyperproliferative disorders (e.g. cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 16; SEQ ID NO 971; 2272pp; English.

```
Sequences AAB38321-B3839 represent the amino acid sequences of 62 human secreted proteins encoded by the genes AAC69512-C69587. The genes and proteins are useful for preventing, amediating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) autoimmune diseases e.g. rheumatoid arthritis; (b) hyperproliferative disorders e.g. neoplasms of the breast or liver; (c) cardiovascular disorders e.g. cardiac arrest; (d) cerebrovascular disorders e.g. cerebral isofomis; (e) angiogenesis; (f) nervous system disorders e.g. creebral isofomis; (e) angiogenesis; (f) nervous system disorders e.g. creebral isofomis and infections caused by bacteria, viruses and fungi; and (h) ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, com aintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid molecules encoding 62 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    159

 AAW1445-52 are the protein products of the car genes (carA-H) which are involved in the biosynthesis of carbapenem, an antibiotic which acts as a beta-lactamase inhibitor. The car biosynthetic genes are regulated by the carR gene product (AAW14444), a positive activator of the biosynthetic genes which functions in trans. The car genes can be used to identify homologous genes in bacteria and fungi, while products of the genes may be used to raise antibodies used to detect clones (in a Streptomyces library) that express cross-reactive protein. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              useful
                                                                                                                                                                                                                                                               carbapenem; carR; carB; carC; carD; carE; carF; carG; carH;
biosynthesis; antibiotic; beta-lactamase inhibitor; regulatory.
            New genes encoding enzymes involved in carbapenem biosynthesis for isolating other carbapenem synthesising genes and producing carbapenem in heterologous organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Holden MTG;

The invention discloses isolated human nucleic acid alternative splicing variants that are all tumour-involved genes (TIG8). The nucleic acids and collypeptides are useful for determining the level of a nucleic acid or polypeptide in a biological sample, for detecting a variant nucleic acid or polypeptide sequences in a biological sample for variant mucleic acid or polypeptide sequences in a biological sample and for determining the ratio between the level of variant sequence in a first biological sample and the level of the original sequence from which composition comprising a carrier and the nucleic acid is useful for composition comprising a carrier and the nucleic acid, is useful for composition comprising a carrier and the nucleic acid, is useful for increasing or decreasing the level of the encoded protein. The nucleic acids are also useful for dagnostic purposes, especially for detecting cancer or a predisposition to cancer, for evaluating the state or aggressiveness of cancer disease, in basic research, for understanding the physiological function of the original TIG, in targeting or developing pharmaceuticals, for distinguishing various stages in the life cycle of the same type of cells which may be helpful for the development of pharmaceuticals for various cancer stages in which cell cycle of pharmaceuticals for various cancer stages in which cell cycle of the rate in product and modulating its activity and for modulating endothelial differentiation and proliferation, as vell as to modulating the paragraph of the variant product and modulation, we are near to make the control of the variant product and modulation, we are near to make the control of the variant product and modulation is accompanied in the variant product and modulation, we are the control of the variant product and modulation, we are the control of the variant product and modulation, we are as to an accompanied.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       modulate apoptosis either ex vivo or in vivo. The sequences presented in ABG796700-ABG79705 are the new variants (NV) 1-36 proteins of the TIGS disclosed

The present invention describes a predictor set comprising a plurality of polynucleotides or polypeptides whose expression pattern is predictive of polynucleotides or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity or members of the protein tyrosine kinase cathway. Also described: (1) predicting whether a compound is capable of modulating the activity of cells, comprising obtaining a sample of cells, cerelating the activity of the cells; (2) a plurality of markers, and correlating the expression of the markers to the compound's ability to modulate the activity of the cells; (2) a plurality of cell lines for correlate with compound sensitivity or resistance of cells associated correlate with a disease state; and (3) identifying polynucleotides and correlate with a disease state, comprising subjecting the plurality of associated with a disease state, comprising subjecting the plurality of cell lines to one or more compounds ensitivity or resistance of cells associated with a disease state by using the collynucleotides or polypeptides that predict the sensitivity or resistance of cells associated with a disease state by using the corresistance of cells associated with a disease state by using the expression pattern of the microarray. The polynucleotides and colpapelides have cytostatic activities, and can be used in gene therapy. The polynucleotides and polypeptides are useful in predicting drug cativity of compounds that interact with potein tyrosine kinase pathways. These may be used in determining drug sensitivity in patients to allow the development of individualized
                                                                                                                                                                                                                                                                                                                                                                                                                                           predictor set; protein tyrosine kinase activity modulator; protein tyrosine kinase; cytostatic; gene therapy; drug sensitivity; genetic profile; cancer; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotides and polypeptides for predicting the activity of compounds that interact with protein tyrosine kinases and/or protein tyrosine kinase pathways.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
